Miguel Gorriti

Front-end developer

Project Experience

- **House Rental App**
Led a team of 6 Developers in the development of a short-term property rental Application. During this project, we applied the knowledge acquired from a bootcamp and explored the use of Tailwind. My primary responsibilities included managing styles, enhancing the user experience, team coordination, tasks assignment, and conducting testing on the application at each sprint. Our collaboration resulted in a successful project delivery, meeting the established timelines, and exceeding our initials expectations.

- **Car Selling App**
In collaboration with my fellow bootcamp peers, we set out to apply our knowledge by developing a test vehicle sales app. Our objective was to put our learning into practice and experiment with various team roles to identify our strengths. Although the project was not fully completed, we managed to create a functional version and define team roles, with me taking the role of leader. Despite not reaching completion, this experience laid the groundwork for out subsequent project, which turned out polished and fully functional, in addition to helping us clarify the responsibilities of each team members.

- **Recipe App**
In this project, I developed a recipe website, actively participating I the front-end and back-end development. My primary goal was to gain experience in the end to end development of a web application.
I worked with SQL to manage a database where related information is stored. Used a server side programming language, such as Node.js, to create endpoints that respond to frontend request and manipulate data in the database. To facilitate communication between front end and back end, I implemented HTTP request, including GET and POST request, using protocols such as AJAX or the fetch API. Working on this project allowed me to become familiar with client-server architecture, database, server-side programming and communication between front end and backend.

Relevant Skills and Technologies

- JavaScript, HTML, CSS, Tailwind, Figma, Redux, React, Bootstrap, PostgressSQL, Python.

- English C2
- Deutsch B2

Education History

Henry Bootcamp.
Full Stack web developement, 2023.

General San Martin National University.
Business Management 2021 – 2022.

General San Martin National University.
Telecommunications engineering 2020 – 2021.

About me

I am a passionate junior front-end developer with a focus on creating engaging and functional user experiences.
My background includes leading teams and contributing to both front-end and back-end development. In these projects, I've worked with technologies such as HTML, CSS, JavaScript, and Node.js, implementing creative and efficient solutions.
My love for coding is complemented by my language skills, as I am fluent in both English and German. This enables me to effectively collaborate in international teams and understand the needs of a global audience.
I am committed to continuing my career growth as a front-end developer, constantly learning and staying up-to-date with the latest trends and technologies. I'm eager to contribute my expertise and skills to the development of innovative solutions that enhance the user experience and drive successful projects forward.
